Movie Application

Group Members
Shawn, Miguel, Josemar, John, Michael

Which software application?

The software application we designed the database for is a movie recommendation application, in which recommends movies to users based on several factors.

Major Features

Personalized movie recommendations
Recommends movies based on user watch history, ratings, and movie popularity score

Trending movies section
Displays movies that are trending based on users views, likes and ratings

Cast Information
Displays information about actors and directors

Movie duration
Shows the duration of the movie

Movie summary
Displays a short summary of each movie

Questions To Be Answered By Application

1. What movies are recommended for me based on my watch history and general ratings?

2. What movies are currently trending?

3. What is the rating and summary of a specific movie?
